# **The Feeding and Swallowing Center of Children's Hospital of Pittsburgh of UPMC Clinical Update 2017:**

This program is designed for physicians, nurses, speech pathologists, occupational therapists, registered dietitians, behavioral health specialists, other health care providers and educators of young children. Course content will explore current evidence-based feeding practices for children. Anticipated topics include: the role of the modified barium swallow in evaluation of childhood dysphagia, infant driven feeding, baby led weaning, and the examination of clinical decision making behind different feeding therapy approaches. The program involves a combination of lectures and panel discussions to encourage participant interaction and discussion.
