

# Sinusitis: Which Children Benefit from Antibiotics?

Sinusitis (sinus infections) is one of the most common illnesses occurring in children. We are trying to find out if sinusitis in children needs to be treated with antibiotics right away.

We are looking for otherwise healthy **2 to 11 year olds**, who have been diagnosed with sinusitis, to participate in our research study.

## Requirements:

- ◆ 2 study visits (enrollment visit and a follow-up visit).
- ◆ Take study product daily for 10 days (your child will receive either antibiotic or placebo—fake medicine).
- ◆ Complete a diary of symptoms each day on your phone.

## Benefits:

- ◆ Increased clinical monitoring of symptoms.
- ◆ 24 hour access to study physicians.
- ◆ Fewer side effects and decreased antibiotic resistance with placebo.

**Compensation will be provided.**
