

Practice/On-site Study Match Checklist

Considering clinical research in your practice?

Primary Investigator:

Study Title:

1. Is the research study question important to the practice?
2. Does this research study address a common practice issue/concern?
3. Does the research conflict with how the office runs? Will it conflict with the provider's regular way of practice?
4. Will the research study help the practice physicians improve care?
5. Will the research study require use of practice/office space?
6. Will the research study require additional time of the practice staff? (For example, will the MA/staff be asked to approach parents about the study?)
7. Will the research study require additional time of the physicians? (For example, will the physician be asked to consent, see the patient, perform follow-up visits, etc.?)
8. Will practice physicians need specific skills to conduct research study? (Specific study equipment training, cath urine, blood draw, etc.) If yes, what?
9. Will the research study disrupt current practice/clinical flow? (Consider amount of time spent in exam room, etc.)
10. Does the practice see enough patients to meet the recruitment goals of the research study?
11. How will the researchers keep me informed?
12. Who should I contact for various questions/concerns?
13. Will the research team communicate patient clinical information to me, and if so, how?
14. How will I make sure that my colleagues are informed about clinic research activities and relevant patient information on an ongoing basis?
